

I would like to put my comment on the sky command system on the positive side. I believe that the sky command will work and should be allowed to be used. I use 2m and 440 here in the metro atlanta area, most of the 2m and 70cm stuff is done on the repeater systems here leaving lots of space for simplex and since not every one has a hf rig that will do sky command so why not allow the use of sky command? next people are going to try to get rid of cross band mobile radios so that those of us out here that only have 5watts and can't reach the repeater with out the cross band mobile will have to buy new rigs. If I am lucky enough to get one of these kenwood radios with sky command. I will want to use it and since I can't find anything in the fcc rules that would make it illegal to use since all the controls are on 7cm and the voice is handled on 2m seems to me that we should be allowed to use it. or at least a good explianation as to what is wrong with skycommand that makes it illegal. my comment approve skycommand
